

Chlorinated Oxidizer Systems

SOIL-THERM has over 22 years of experience designing and building the most powerful and reliable chlorinated oxidizers in the industry.

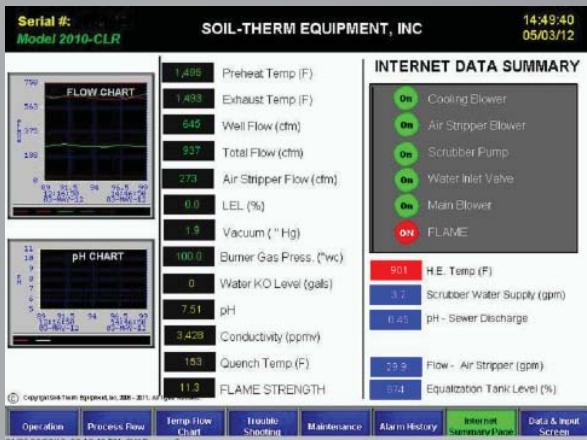

From small 150 cfm to larger 2,500 cfm chlorinated systems with scrubbers, SOIL-THERM systems will not let you down. From TCE, PCE, DCA, Benzene, Freons, and long-chain chlorinateds, SOIL-THERM has demonstrated reliable operation and destruction efficiencies greater than 99.99+%. Our patented Jet-THERM combustion process is the ultimate in thermal destruction, especially where space is limited.

Recent customer requirements have included optimizing our latest ReMAC monitoring technology for complete control and diagnostics of the operating system anywhere and anytime. Whether its pH, dilution air, optimizing flows, or extracting data, SOIL-THERM systems are the most sophisticated but simple to operate machines on the market.

Select from 3-standard models, or have SOIL-THERM customize a system for your application. Skid, enclosed, or mobile mounted designs are available.

Smaller Sizes and Powerful Performance !
